Other topics include the newer initiatives in XHTML (XForms, XFrames, and modularization) and the essentials of XML for advanced readers. You'll learn how to:

- Use style sheets to control your document's appearance
- Work with programmatically generated HTML
- Create tables, both simple and complex
- Use frames to coordinate sets of documents
- Design and build interactive forms and dynamic documents
- Insert images, sound files, video, Java applets, and JavaScript programs
- Create documents that look good on a variety of browsers

The authors apply a natural learning approach that uses straightforward language and plenty of examples. Throughout the book, they offer suggestions for style and composition to help you decide how to best use HTML and XHTML to accomplish a variety of tasks. You'll learn what works and what doesn't, and what makes sense to those who view your web pages and what might be confusing. Written for anyone who wants to learn the language of the Web--from casual users to the full-time design professionals--this is the single most important book on HTML and XHTML you can own.
